

Compile&Fit

主讲: 龙良曲

Outline Compile Fit Evaluate Predict

Individual loss and optimize

```
with tf.GradientTape() as tape:
        x = tf.reshape(x, (-1, 28*28))
        out = network(x)
        y_onehot = tf.one_hot(y, depth=10)
        loss = tf.reduce_mean(tf.losses.categorical_crossentropy(y_onehot, out,
from_logits=True))
    grads = tape.gradient(loss, network.trainable_variables)
    optimizer.apply_gradients(zip(grads, network.trainable_variables))
```

Now

Individual epoch and step

```
for epoch in range(epochs):

for step, (x, y) in enumerate(db):
....
```

Now

Standard Progressbar

```
ully opened dynamic library libcublas.so.10.0
Epoch 2/10
Epoch 3/10
Epoch 4/10
Epoch 5/10
Epoch 6/10
Epoch 7/10
Epoch 8/10
Epoch 9/10
```

Individual evaluation

```
if step % 500 == 0:
        total, total_correct = 0., 0
        for step, (x, y) in enumerate(ds_val):
             x = tf.reshape(x, (-1, 28*28))
             \overline{\text{out}} = \overline{\text{network}(x)}
             pred = tf.argmax(out, axis=1)
             pred = tf.cast(pred, dtype=tf.int32)
             correct = tf.equal(pred, y)
             total_correct += tf.reduce_sum(tf.cast(correct,
dtype=tf.int32)).numpy()
             total += x.shape[0]
         print(step, 'Evaluate Acc:', total_correct/total)
```

Now

Evaluation

```
: 0.0864[1] vallaccuracy: 0.9805
Epoch 2/10
[0a0637.Deval(accuracy:/019805/relu/),
Epochs 3/10se(128, activation='relu
l0v0801Denval3accuracy:t0v9805elu'),
Epochs 4/10se
0.0915 - val accuracy: 0.9688
Epoch 5/10
0.1232 - val accuracy: 0.9609
Epoch 6/10
Epoch 7/10
0.0360 - val accuracy: 0.9883
Epoch 8/10dation data=ds val,
```

Test

```
network.compile(optimizer=optimizers.Adam(lr=0.01),
        loss=tf.losses.CategoricalCrossentropy(from_logits=True),
       metrics=['accuracy']
network.fit(db, epochs=10, validation_data=ds_val,
             validation_steps=2)
network.evaluate(ds_val)
```

Test

Predict

```
sample = next(iter(ds_val))
x = sample[0]
y = sample[1] # one-hot
pred = network.predict(x) # [b, 10]
# convert back to number
y = tf.argmax(y, axis=1)
pred = tf.argmax(pred, axis=1)
print(pred)
print(y)
```
